SUPPLEMENT TO REPORT NO.

25X1X

- 1. At the Ecole Polytechnique, I visited AMPRINCE—HINGUET's laboratory. This, I presume, is the "French Government Laboratory" you inquired about, as it is a government school and laboratory.
- I did notice some small construction work going on in one of the courts at the Ecole but if it is to be a building it will be a very small one.
- 3. The only scientific work I observed to be in progress at the laboratory involved cosmic ray research. Euch of the work, however, is done in aircraft and in the French Alps. I remember reading an article recently which appeared in a new US magazine "Physics Today", and told of the work being done in the Alpine laboratory. There were several illustrations accompanying the article.
